National Tsing Hua University
Electrical Engineering Dept.,
Fall Semester, 2019
EE-2310 計算機程式設計 (Introduction to Programming)
Homework #5 (3 points)
Due on Dec. 5, 2019 @ the Lab Session
Late Homeworks will NOT be accepted !

Source: Online Judge – Decode the Mad Man

Problem: Once in BUET, an old professor had gone completely mad. He started talking with some peculiar words. Nobody could realize his speech and lectures. Finally the BUET authority fall in great trouble. There was no way left to keep that man working in university. Suddenly a student (definitely he was a registered author at UVA ACM Chapter and hold a good rank on 24 hour-Online Judge) created a program that was able to decode that professor's speech. After his invention, everyone got comfort again and that old teacher started his everyday works as before. So, if you ever visit BUET and see a teacher talking with a microphone, which is connected to a IBM computer equipped with a voice recognition software and students are taking their lecture from the computer screen, don't get thundered! Because now your job is to write the same program which can decode that mad teacher's speech!

Input

The input file will contain only one test case i.e. the encoded message. The test case consists of one or more words.

Output

For the given test case, print a line containing the decoded words. However, it is not so hard task to replace each letter or punctuation symbol by "the two immediately to its left" alphabet on your standard keyboard. (Note that **circular shifting in the same row** will be applied when there is an out-of-boundary situation. For example, letter 'a' will be replaced by ';', and letter 's' will be replaced by '\''.).

Sample Input
k[r dyt I[o
zubiteqw iwudw;bbyvd y' stv
Sample Output
how are you
(Display the decoded words by your program here)
